Description: Spot Sensex is hovering around 83,880–83,900, right at a **minor demand + VWAP zone**. The 83800 CE has already retraced from the highs and is forming a **higher low** near 550–560, which is positive. On the option chart: Immediate **support:** 540–550 (good base), **Resistance:** 600–620 (once this breaks, momentum can expand fast) , **hence I recommend SENSEX CE**
